

Can blockchain help food manufacturers?

Authenticate's latest white paper covering the subject of blockchain technology within the global food supply network is now available to download.

Amid a wave of headline-grabbing projects and pronouncements from some of the industry's biggest players, food business operators who have attended conferences over the past year will have heard the subject of blockchain touched upon, if not pored over, in discussions of its game-changing potential for a sector which arguably has a pressing need for modernisation and reform.

Yet despite extensive coverage and curiosity, there remains a great deal of confusion around blockchain's practical applications for food operators, as well as concern on the part of businesses who fear being left behind.

The new 10-page white paper sets out to provide an easy-to-read breakdown of how blockchain technology works, followed by an overview of the food industry's approach to its application so far, and the role Authenticate is playing in exploring its practical application for the benefit of our members.
